

Java

```
class Solution {  
    public String removeSubstring(String s, int k) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} s  
 * @param {number} k  
 * @return {string}  
 */  
var removeSubstring = function(s, k) {  
  
};
```

TypeScript

```
function removeSubstring(s: string, k: number): string {  
  
};
```

C++

```
class Solution {
```

```
public:
    string removeSubstring(string s, int k) {

    }
};
```

C#

```
public class Solution {
    public string RemoveSubstring(string s, int k) {

    }
}
```

Kotlin

```
class Solution {
    fun removeSubstring(s: String, k: Int): String {

    }
}
```

Go

```
func removeSubstring(s string, k int) string {

}
```
